Australian Design Award (QCC) 1997

Australian and NSW Small Business and Manufacturer of the Year 1997

Now the most innovative maximum security locking system on earth offers unparalleled flexibility. BiLock now gives you both key control and core control with the Quick Change Core (QCC).

Now featured in the Niagara Casino, Canada and Australia's Crown Casino, Sydney's Star City Casino, our QCC range of switch and cam locks has been expanded to include a wide architectural range.

The QCC can easily be removed from your hardware for maintenance or recombination without disassembling the lock. Rekeying a lock can be as simple as withdrawing a cylinder and replacing it with another - in seconds! You can even shift the QCC between different types of locks for example, knobs to switch locks, mortise to knob locks, switch locks to cam locks etc.

Every QCC is identical with the exception of pinning combinations, where requested.

## QCC Key Features

- ▲ Uniquely dual bladed and "U" shaped.
- ▲ Each side of the key is cut differently and engages its own set of pin tumblers and side bar.
- ▲ The uncut key is cut and formed with proprietary equipment at the factory or by one of our 140 authorised agents throughout the world.
- ▲ The coloured key head offers simple colour coded master keying capabilities.
- ▲ The BiLock system requires key registration that is strictly enforced with keys only duplicated with authorisation.

**Simplicity** - easy use and minimum maintenance.

**Durability** - fewer moving parts and a stronger key.

**Tamper Resistance** - a high level of pick resistance and legal protection.

**Flexibility** - over 17 million combinations in either standard or QCC options.

**Compatibility** - BiLock QCC New Generation and standard cylinders can retrofit most hardware.
